FNCE 922:
CONTINUOUS-TIME FINANCIAL ECONOMICS

Prof. Domenico Cuoco   Fall 2004

Office: 2330 SH-DH
Phone: 898-8290
E-mail: cuoco@wharton.upenn.edu

Course Description:

This course is an introduction to the theory of continuous-time financial economics. The emphasis is not only on the core results concerning dynamic asset pricing and consumption/portfolio choices, but also on the main mathematical and statistical tools on which the theory is built. Upon completion of the course, students should be sufficiently familiar with these tools to be able to formulate and analyze continuous-time financial models.

    The articles listed in the course outline include many of the classical papers in the field as well as some of the more recent developments. Although some of the articles may at first appear incomprehensible, especially at the beginning of the course, you are strongly encouraged to read as many of them as possible.

Prerequisites:

The prerequisite for this course is FNCE 911 (or familiarity with C.-f. Huang and R. Litzenberger, *Foundations for Financial Economics*, North-Holland, 1988). Some graduate-level knowledge of analysis and statistics is highly recommended but not required.

Text and References:

The required textbook is:

    D. Duffie, *Dynamic Asset Pricing Theory*, Princeton University Press, Third edition, 2001.

The following texts can also be useful:

    I. Karatzas and S.E. Shreve, *Methods of Mathematical Finance*, Springer, 1998.

    R.C. Merton, *Continuous-Time Finance*, Blackwell, 1990.

    J. Ingersoll, *Theory of Financial Decision Making*, Rowman and Littlefield, 1987.

The recommended mathematical references are:

    H.L. Royden, *Real Analysis*, Macmillan, 1988.

    N. Dunford and J.T. Schwartz, *Linear Operators. Part I: General Theory*, Wiley, 1988.

The recommended statistical references are:

J.M. Steele, *Stochastic Calculus and Financial Applications*, Springer, 2001.

I. Karatzas and S.E. Shreve, *Brownian Motion and Stochastic Calculus*, Springer, 1988.

P. Protter, *Stochastic Integration and Differential Equations*, Springer, 1990.

Course Outline and Suggested Readings:

1. Background Material from Mathematics and Statistics

Lecture notes.

2. Arbitrage and Martingales

Lecture notes.

Textbook, Chapter 6.

J.M. Harrison and D. Kreps (1979), "Martingales and Arbitrage in Multiperiod Securities Markets", *Journal of Economic Theory* **20**, 381–408.

∗ S. Clark (1993), "The Valuation Problem in Arbitrage Price Theory", *Journal of Mathematical Economics* **22**, 463–478.

∗ K. Back and S. Pliska (1991), "On the Fundamental Theorem of Asset Pricing with an Infinite State Space", *Journal of Mathematical Economics* **20**, 1–18.

P.H. Dybvig and C.-f. Huang (1989), "Nonnegative Wealth, Absence of Arbitrage, and Feasible Consumption Plans", *Review of Financial Studies* **1**, 377–401.

3. Complete Markets: Hedging and Pricing Contingent Claims

Lecture notes.

Textbook, Chapters 5 and 8.

F. Black and M. Scholes (1973), "The Pricing of Options and Corporate Liabilities", *Journal of Political Economy* **81**, 637–654.

∗ R. Merton (1973), "Theory of Rational Option Pricing", *Bell Journal of Economics and Management Science* **4**, 141–183.

∗ I. Karatzas (1988), "On the Pricing of American Options", *Applied Mathematics and Optimization* **17**, 37–60.

∗ D. Duffie and R. Stanton (1992), "Pricing Continuously Resettled Contingent Claims", *Journal of Economic Dynamics and Control* **16**, 561–573.
